## About Nodeum

Nodeum is data management software, agentless, running on commodity hardware. The solution manages and abstracts storage tiers: NAS, Cloud, Object & Tape. The objective is to automate the data management process, integrate it into customer business logic and connect end-user pipelines with any storage system for data movement, archiving, and protection. It achieves high-performance workflows to gain control of exponential data growth. And save time with a single, intuitive storage and process management software that works across multiple storage silos.
